
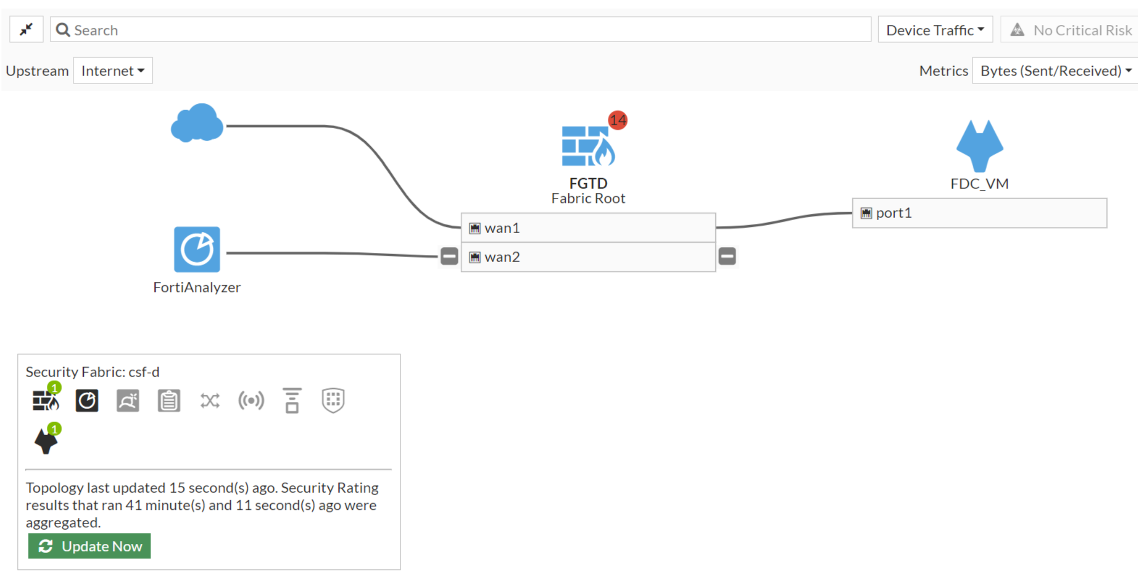
Logical topology view:



Configuring FortiMail

FortiMail can be added to the Security Fabric so it appears in the topology views and the dashboard widgets.

To add FortiMail to the Security Fabric in the GUI:

1. In FortiOS, ensure that FortiGate is prepared to add FortiMail to the Security Fabric. See Preparing FortiGate for supported Security Fabric devices on page 4594.
2. (Optional) In FortiOS, configure pre-authorization of FortiMail to enable the device to join the Security Fabric as soon as it connects. See Configuring pre-authorization of supported Security Fabric devices on page 4596.
3. In FortiMail, integrate the device:

FortiMail instructions are included for convenience. For the latest FortiMail instructions, see the *FortiMail Administration Guide*.

a. Go to *System > Customization* and click the *Corporate Security Fabric* tab (or the *Corporate Security Fabric* tab in FortiMail 6.4.2 and earlier).
b. Click the toggle to enable the Fabric.
c. Enter the *Upstream IP Address* (root FortiGate) and the *Management IP* of the FortiMail.
d. Click *Apply*.

4. In FortiOS, authorize the device. See Authorizing supported connectors on page 4601.

   If FortiMail is pre-authorized, you can skip this step.
5. On FortiOS, go to *Security Fabric > Physical Topology* or *Security Fabric > Logical Topology* to view more information.

Configuring FortiMonitor

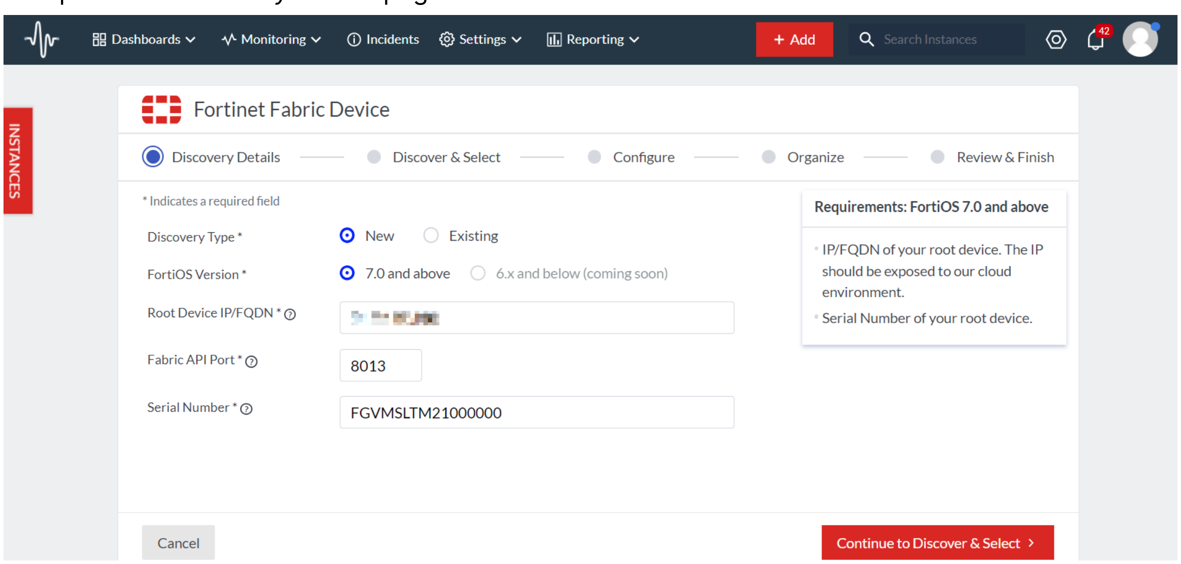
FortiMonitor can be added to the Security Fabric so it appears in the topology views and the dashboard widgets.

FortiMonitor requires REST API access to FortiGate.

To add FortiMonitor to the Security Fabric:

1. In FortiOS, ensure that FortiGate is prepared to add FortiMonitor to the Security Fabric. See Preparing FortiGate for supported Security Fabric devices on page 4594.
2. (Optional) In FortiOS, configure pre-authorization of FortiMonitor to enable the device to join the Security Fabric as soon as it connects. See Configuring pre-authorization of supported Security Fabric devices on page 4596.
3. In FortiMonitor, start configuring the device to join the Security Fabric (see Enable Security Fabric monitoring for detailed instructions):

   a. Complete the *Discovery Details* page.

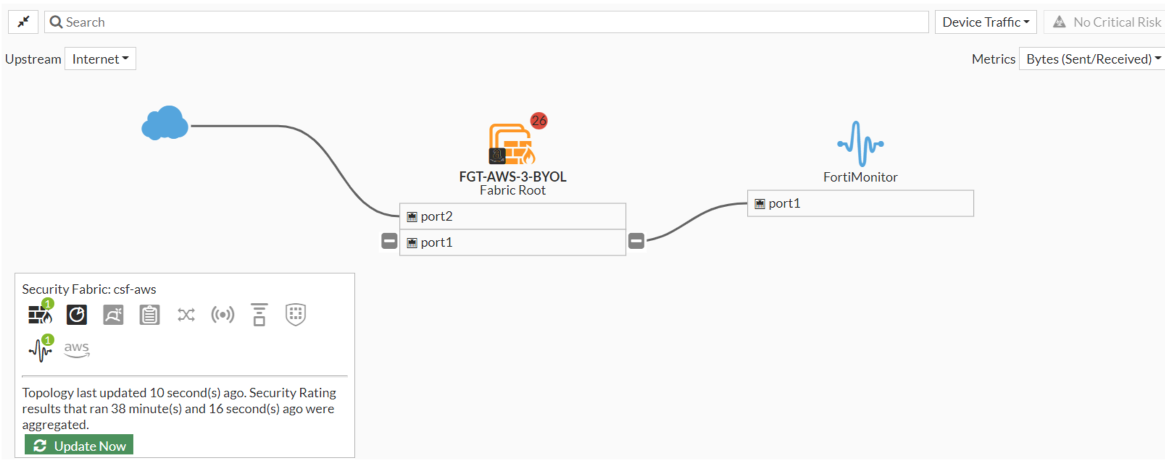


4. In FortiOS, authorize the FortiMonitor. See Authorizing supported connectors on page 4601.

   If FortiMonitor is pre-authorized, you can skip this step.

5. Go to *Security Fabric > Physical Topology* or *Security Fabric > Logical Topology* to view more information.
   Physical topology view:

   Logical topology view:



6. In FortiMonitor, complete the device configuration. (See Enable Security Fabric monitoring for detailed instructions.)

Configuring FortiNAC

A FortiNAC device can be added to the Security Fabric on the root FortiGate. After the device has been added and authorized, you can log in to the FortiNAC from the FortiGate topology views.

FortiNAC requires REST API access to FortiGate.

> Adding a FortiNAC to the Security Fabric requires a FortiNAC with a license issued in the year 2020 or later that includes an additional certificate. The device cannot be added if it has an older license. Use the `licensetool` in the FortiNAC CLI to determine if your license includes the additional certificate.

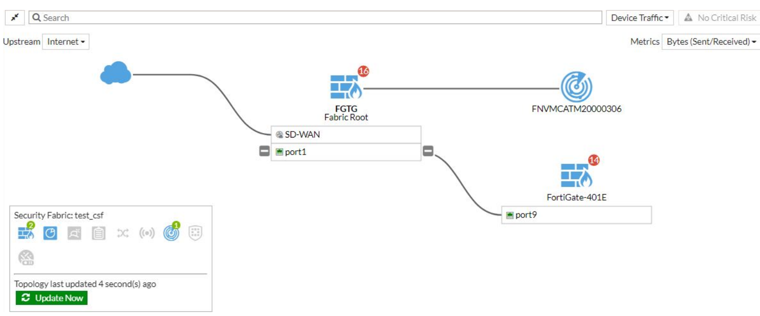
To add FortiNAC to the Security Fabric in the GUI:

1. In FortiOS, ensure that FortiGate is prepared to add FortiNAC to the Security Fabric. See Preparing FortiGate for supported Security Fabric devices on page 4594. On the root FortiGate, *Allow downstream device REST API access* must be enabled.
2. (Optional) In FortiOS, configure pre-authorization of FortiNAC to enable the device to join the Security Fabric as soon as it connects. See Configuring pre-authorization of supported Security Fabric devices on page 4596.
3. On FortNAC, configure telemetry and input the IP address of the root FortiGate. See the FortiNAC Security Fabric SSO guide for more information.
4. In FortiOS on the root FortiGate, authorize the FortiNAC. See Authorizing supported connectors on page 4601.

   If FortiNAC is pre-authorized, you can skip this step.
5. Go to *Security Fabric > Physical Topology* or *Security Fabric > Logical Topology* to view more information.

   Physical topology view:

   
   Logical topology view:

6. Run the following command in the CLI to view information about the FortiNAC device's status:

```
# diagnose sys csf downstream-devices fortinac
{
  "path":"FG5H1E5818900126:FNVMCATM20000306",
  "mgmt_ip_str":"10.1.100.197",
  "mgmt_port":0,
  "admin_port":8443,
  "serial":"FNVMCATM20000306",
  "host_name":"adnac",
  "device_type":"fortinac",
  "upstream_intf":"port2",
  "upstream_serial":"FG5H1E5818900126",
  "is_discovered":true,
```

```
  "ip_str":"10.1.100.197",
  "downstream_intf":"eth0",
  "authorizer":"FG5H1E5818900126",
  "idx":1
}
```

Configuring FortiNDR

FortiNDR can be added to the Security Fabric so that it appears in the topology views and the dashboard widgets.

To add FortiNDR to the Security Fabric in the GUI:

1. In FortiOS, ensure that FortiGate is prepared to add FortiNDR to the Security Fabric. See Preparing FortiGate for supported Security Fabric devices on page 4594.
2. (Optional) In FortiOS, configure pre-authorization of FortiNDR to enable the device to join the Security Fabric as soon as it connects. See Configuring pre-authorization of supported Security Fabric devices on page 4596.
3. On FortiNDR:
   a. Verify that the pre-trained models (engines) are up to date. See FortiGuard in the FortiNDR Administration Guide for more information.
   b. Configure and authorize the FortiGate. See Security Fabric Connector in the FortiNDR Administration Guide for more information.
4. In FortiOS on the root FortiGate, authorize the FortiNDR. See Authorizing supported connectors on page 4601.

   If FortiNDR is pre-authorized, you can skip this step.
5. On FortiOS, go to *Security Fabric > Physical Topology* or *Security Fabric > Logical Topology* to view more information.

Configuring FortiTester

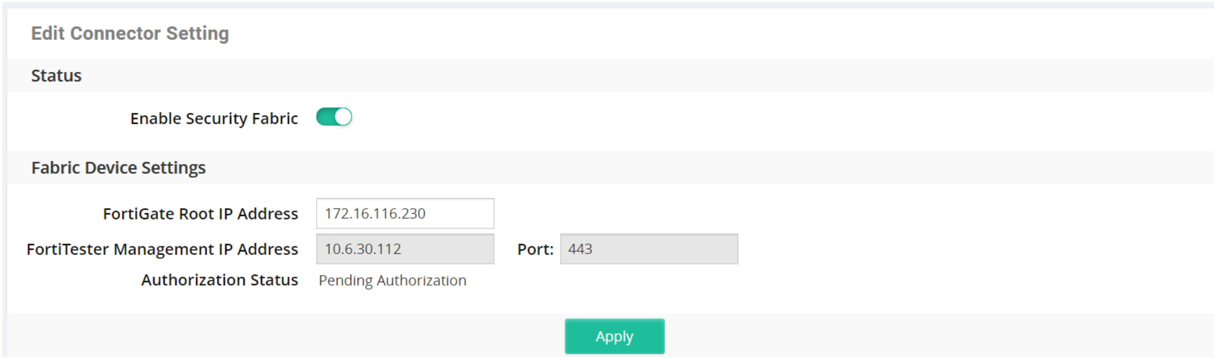
FortiTester can be added to the Security Fabric and authorized from the Security Fabric topology views. Once added, the FortiTester will appear in the *Security Fabric* widget on the dashboard.

To add FortiTester to the Security Fabric in the GUI:

1. In FortiOS, ensure that FortiGate is prepared to add FortiTester to the Security Fabric. See Preparing FortiGate for supported Security Fabric devices on page 4594.
2. (Optional) In FortiOS, configure pre-authorization of FortiTester to enable the device to join the Security Fabric as soon as it connects. See Configuring pre-authorization of supported Security Fabric devices on page 4596.
3. In FortiTester, enable the Security Fabric:

   See also the *FortiTester Administration Guide*.
   a. Go to *System Settings > Security Fabric > Settings*.
   b. Click the toggle to enable the device (*Enable Security Fabric*).

c. Enter the *FortiGate Root IP Address*.



d. Click *Apply*.

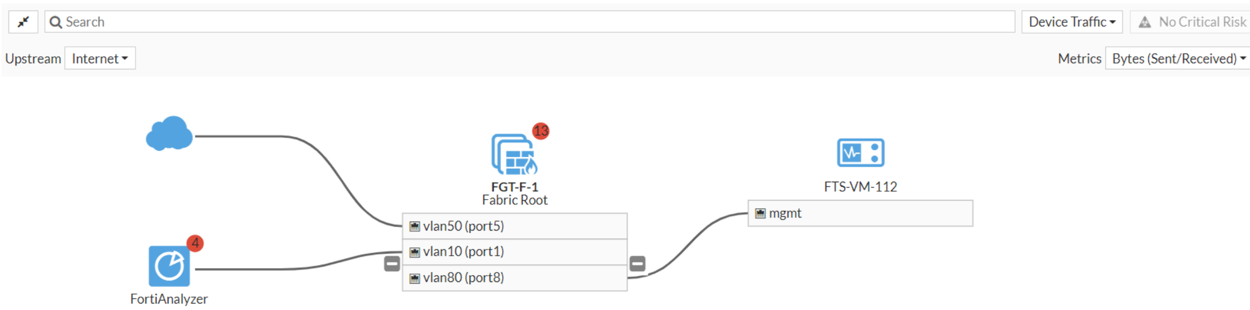
4. In FortiOS, authorize the FortiTester. See Authorizing supported connectors on page 4601.

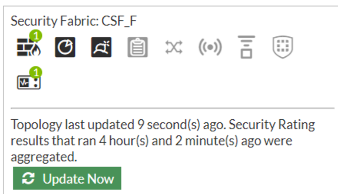
   If FortiTester is pre-authorized, you can skip this step.

5. Go to *Security Fabric > Physical Topology* or *Security Fabric > Logical Topology* to view more information.

   Physical topology view:

   Logical topology view:



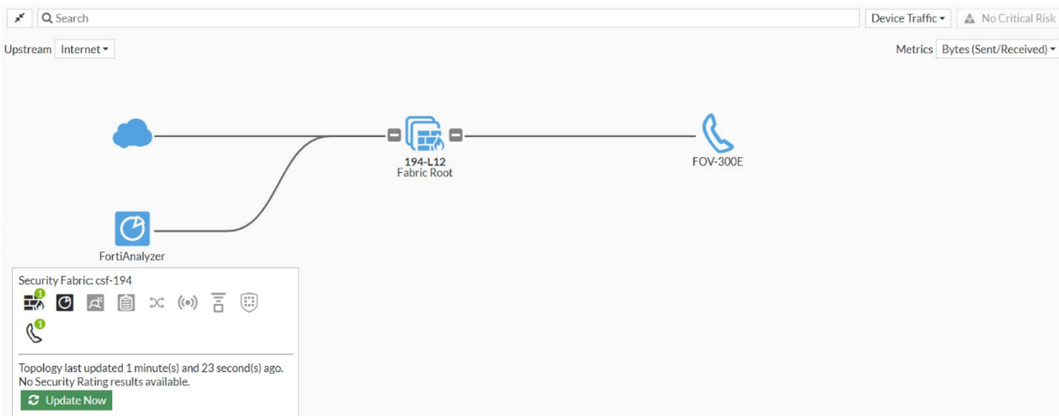


Configuring FortiVoice

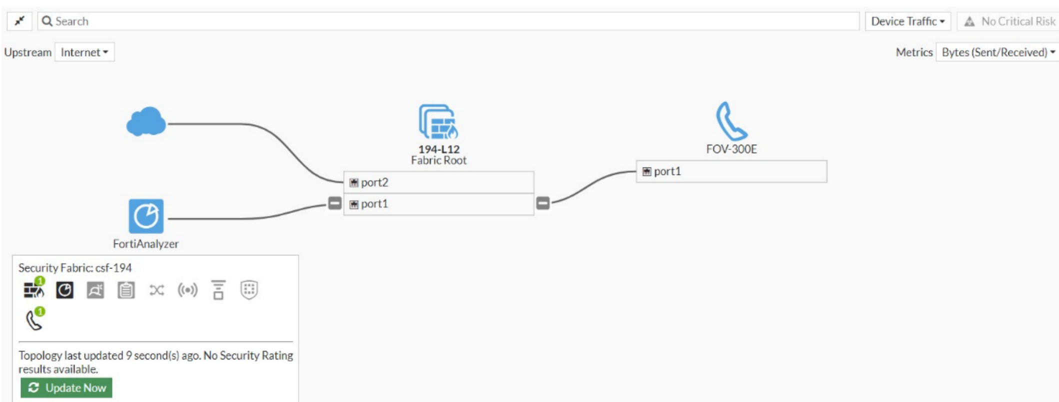
A FortiVoice can be added to the Security Fabric on the root FortiGate. Once the FortiVoice is added and authorized, you can log in to the device from the Security Fabric topology pages.

To add FortiVoice to the Security Fabric in the GUI:

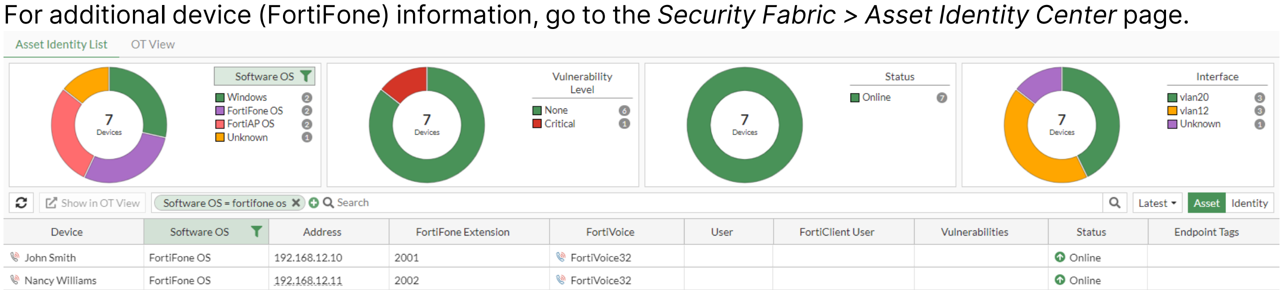
1. In FortiOS, ensure that FortiGate is prepared to add FortiVoice to the Security Fabric. See Preparing FortiGate for supported Security Fabric devices on page 4594.
2. (Optional) In FortiOS, configure pre-authorization of FortiVoice to enable the device to join the Security Fabric as soon as it connects. See Configuring pre-authorization of supported Security Fabric devices on page 4596.
3. On FortiVoice, enable the Security Fabric. See Enabling Security Fabric in the FortiVoice Phone System Administration Guide.
4. In FortiOS, authorize the FortiVoice. See Authorizing supported connectors on page 4601.
   If FortiVoice is pre-authorized, you can skip this step.
5. Go to *Security Fabric > Physical Topology* or *Security Fabric > Logical Topology* to view more information.
   Physical topology view:



Logical topology view:



6. For additional device (FortiFone) information, go to the *Security Fabric > Asset Identity Center* page.



Configuring FortiWeb

A FortiWeb can be added to the Security Fabric on the root FortiGate.

To add FortiWeb to the Security Fabric in the GUI:

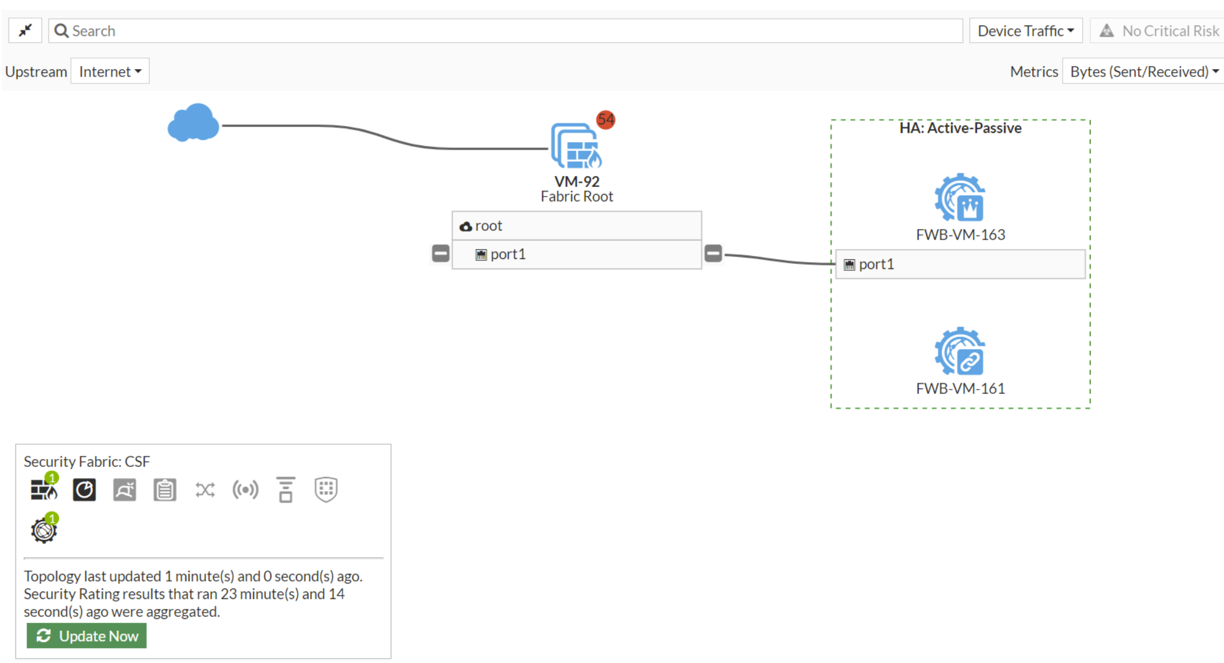
1. In FortiOS, ensure that FortiGate is prepared to add FortiWeb to the Security Fabric. See Preparing FortiGate for supported Security Fabric devices on page 4594.
2. (Optional) In FortiOS, configure pre-authorization of FortiWeb to enable the device to join the Security Fabric as soon as it connects. See Configuring pre-authorization of supported Security Fabric devices on page 4596.

3. On FortiWeb, edit the FortiGate *Fabric Connector* settings. See Fabric Connector: Single Sign On with FortiGate. The *Connection Status* is currently *Authorize pending*.
4. In FortiOS, authorize the FortiWeb. See Authorizing supported connectors on page 4601.

   If FortiWeb is pre-authorized, you can skip this step.
5. Go to *Security Fabric > Physical Topology* or *Security Fabric > Logical Topology* to view more information.

   Physical topology view:

   Logical topology view:



Allowing FortiDLP Agent communication through the FortiGate

Every FortiDLP Agent requires a direct connection to the FortiDLP Cloud to report real-time data and receive configuration updates. This is outlined in Allowing communication between the FortiDLP Agent and FortiDLP Cloud.

As such, FortiDLP Agents operating behind the FortiGate firewall must be able to reach the FortiDLP Cloud servers. The servers must be trusted by the FortiGate and a corresponding firewall policy must allow traffic to these servers.

To view the FortiDLP Cloud server addresses on the FortiGate:

1. Go to *Policy & Objects > Internet Service Database*.
2. Search for *FortiDLP*.
3. Double-click the *Fortinet-FortiDLP.Cloud* entry to view it.
4. In the right hand panel, click *View/Edit Entries* to see the addresses.

To allow traffic to FortiDLP Cloud servers:

1. Go to *Policy & Objects > Firewall Policy*.
2. Click *Create new*.
3. Select the *Incoming interface* and the *Outgoing interface*.
4. Select the *Source* address.
5. For the *Destination* address
   a. Click in the field and, in the slide-out pane, select *Internet Service* from the drop-down menu.
   b. Search for *FortiDLP*.
   c. Select the *Fortinet-FortiDLP.Cloud* entry.
   d. Click *Close*.
6. Leave remaining settings as their default values and click *OK*.

Authorizing Security Fabric devices by certificate NEW

Downstream Security Fabric members can be authorized based on the certificate issuer's CN and the device's subject CN. As long as the issuer is a trusted CA, or one of the CAs in the hierarchy of signing chain is a trusted CA, downstream devices will maintain authorization, even if certificates are renewed, reducing administration reauthorization frequency.

Use the following commands:

```
config system csf
    ...
    config trusted-list
        edit <name>
            set action [accept | deny]
```

```
            set ca <string>
            set ca-fingerprint <string>
            set cn <string>
            set index <integer>
            set role {downstream | upstream}
        next
    end
end
```

Option	Description
ca <string>	Used for custom certificates. Displays the name of the CA from the certificate chain for the downstream FortiGate in a Security Fabric. You must upload the CA to the root FortiGate, and edit the certificate to set `fabric-ca enabled`.
ca-fingerprint <string>	SHA512 fingerprint of a CA on the certificate chain for the downstream FortiGate.
cn <string>	Displays the value retrieved from the Security Fabric pending list. Can be a factory or custom certificate. Can also be the serial number for the downstream or upstream FortiGate. When set to a serial number, the factory certificate is used by default.
role {downstream | upstream}	Device role to this member: • `downstream`: Downstream device (client). • `upstream`: Upstream device (server).

Starting in FortiOS 8.0.0, the following commands are no longer available:

```
config system csf
    ...
    config trusted-list
        edit <name>
            set action [accept|deny]
            set authorization-type {serial | certificate}
            set certificate <var-string>
            set downstream-authorization {enable | disable}
            set ha-members <string>
            set index <integer>
            set serial <string>
        next
    end
end
```

Example

This example uses the following FortiGates in a Security Fabric:

- Root FortiGate: 30-FGT-HA-93
- Downstream FortiGate using a third-party certificate: 130-FGT-HA-95

- Downstream FortiGate using a built-in Fortinet_Factory certificate: 130-FGT-HA-91

Following is a summary of the process:

1. Configure the Security Fabric root FortiGate (130-FGT-HA-93):
   a. Enable the FortiGate to serve as the root FortiGate
   b. Import the CA certificate for the third-party certificate that downstream FortiGate 130-FGT-HA-95 will use to join the Security Fabric.
2. Configure downstream FortiGate 130-FGT-HA-95:
   a. Enable the FortiGate to join the Security Fabric using a third-party certificate.
   b. Verify and authorize the root FortiGate in the Security Fabric.
3. Configure downstream FortiGate 130-FGT-HA-91:
   a. Enable the FortiGate to join the Security Fabric through FortiGate 130-FGT-HA- using a built-in certificate.
   b. Verify and authorize the root FortiGate in the Security Fabric.
4. On the root FortiGate (130-FGT-HA-93):
   a. Verify and authorize downstream FortiGate 130-FGT-HA-95 to join the Security Fabric.
   b. Verify and authorize downstream FortiGate 130-FGT-HA-91 to join the Security Fabric.

To configure a Security Fabric root FortiGate in the GUI:

1. Configure 130-FGT-HA-93 as Security Fabric root FortiGate.
   a. On the root FortiGate (130-FGT-HA-93), go to *Security Fabric > Fabric Connectors*, and double-click the *Security Fabric Setup* card to open it for editing.
   b. Set *Security Fabric role* to *Serve as Fabric Root*.

   c. Set the remaining options, and click *OK*.
2. On the root FortiGate (130-FGT-HA-93), import the CA certificate of the third-party certificate.

The imported CA certificate will be used to verify the downstream FortiGate (130-FGT-HA-95) when it joins the Security Fabric.

a. Go to *System > Certificates*.

b. Click *Create/Import > CA Certificates*.

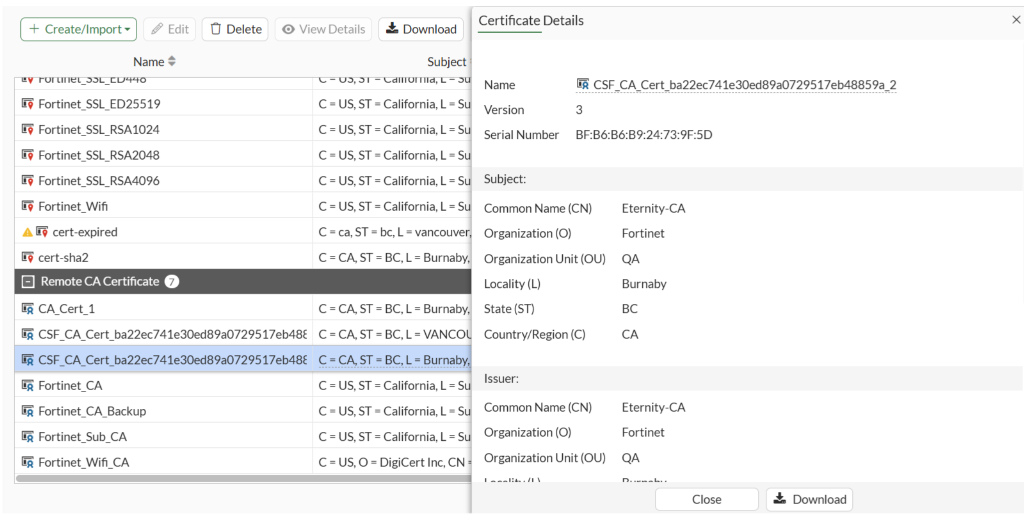
c. Complete the options, and click *OK* to import the CA certificate.

d. Edit the imported CA in the CLI to enable `fabric-ca`:

The CA is renamed to format `CSF_CA_Cert_uid in csf setting_index` (for example, `CSF_CA_Cert_ba22ec741e30ed89a0729517eb48859a_2`).

```
config vpn certificate ca
    edit "<CA certificate>"
        set range global
        set fabric-ca enable
    next
...
end
```

e. Double-click the renamed CA certificate to display its details.



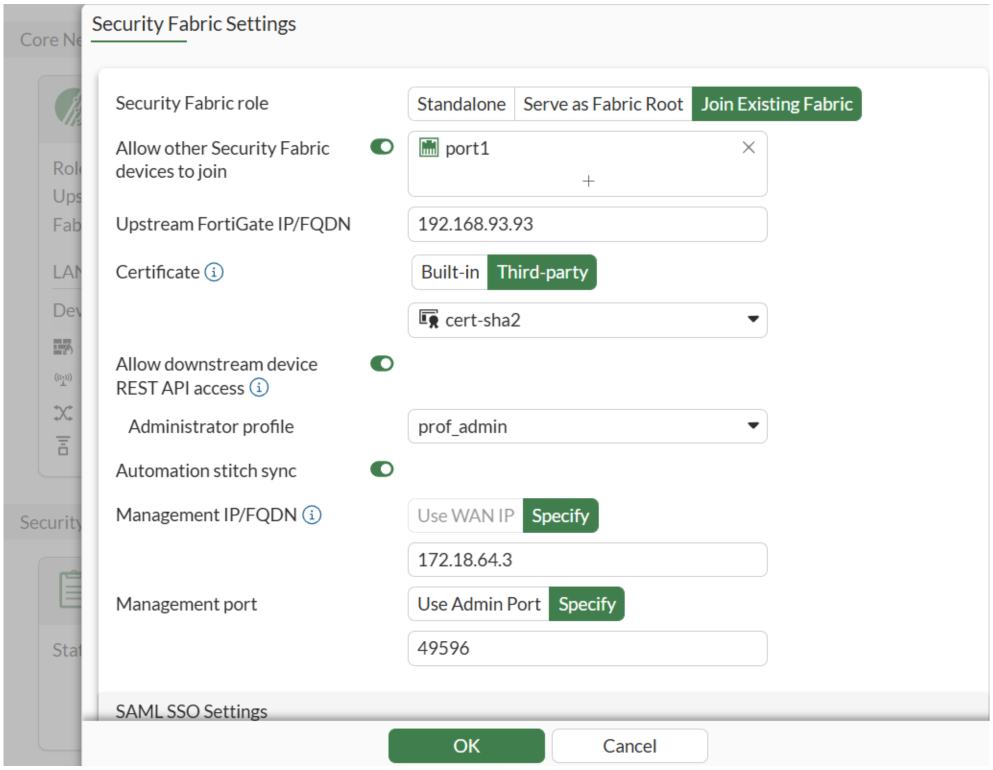
To configure a downstream FortiGate 130-FGT-HA-95 in the GUI:

1. On the downstream FortiGate (130-FGT-HA-95), import the third-party certificate.
2. Configure the downstream FortiGate to join the Security Fabric with the third-party certificate.

a. Go to *Security Fabric > Fabric Connectors*.

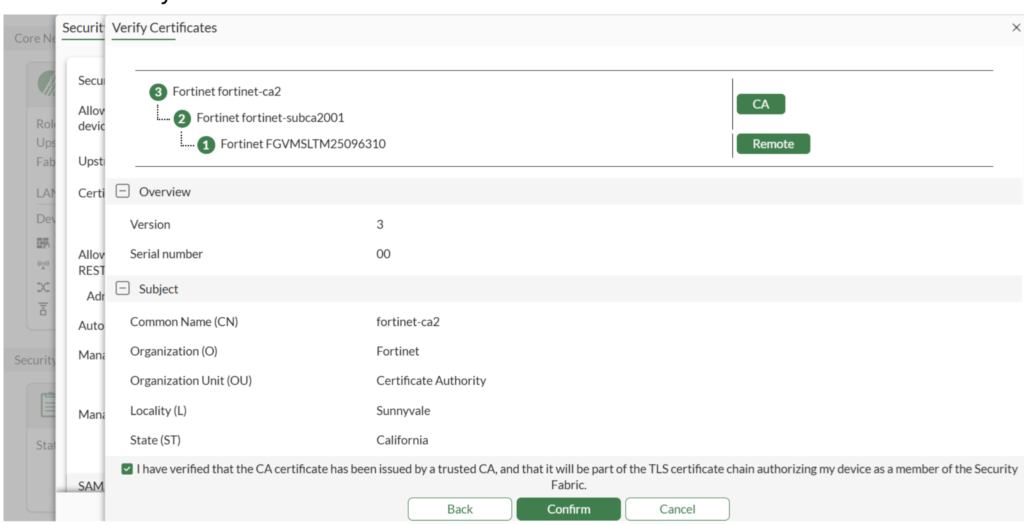
b. Set *Security Fabric role* to *Join Existing Fabric*.

c. Set *Certificate* to *Third-party* and select the imported third-party certificate.



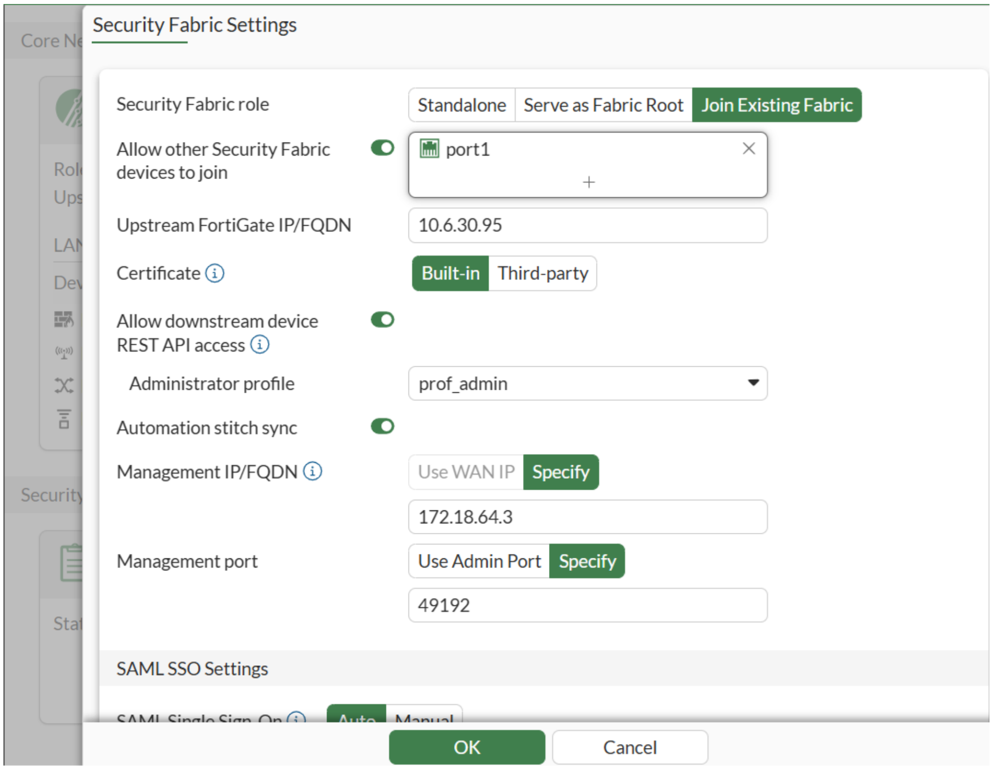
d. Set the remaining options and click *OK*.

3. On the downstream FortiGate (130-FGT-HA-95), verify and authorize the root FortiGate (130-FGT-HA-93) in the Security Fabric.

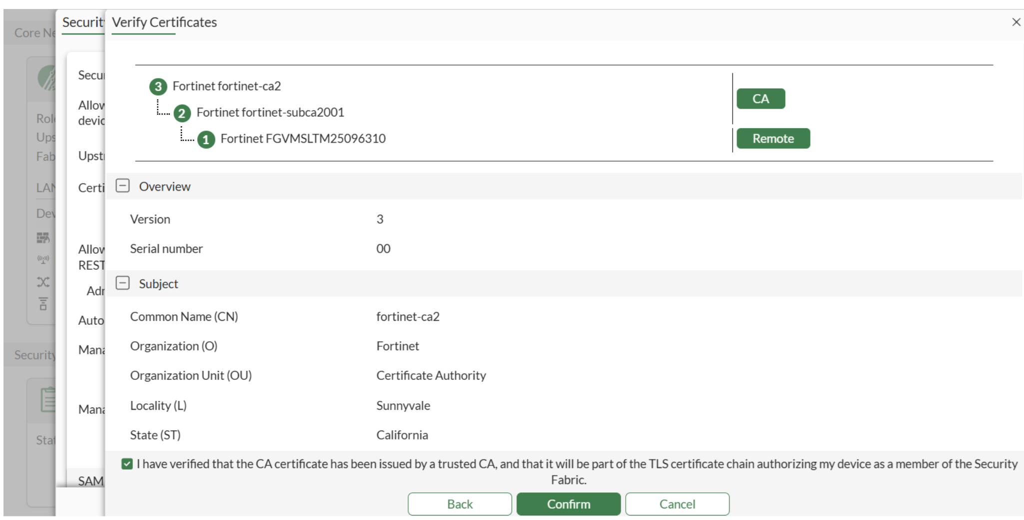


To configure a downstream FortiGate 130-FGT-HA-91 in the GUI:

1. Configure the other downstream FortiGate (130-FGT-HA-91) to join the Security Fabric through downstream FortiGate 130-FGT-HA-95 using a built-in Fortinet_Factory certificate.
   When *Certificate* is set to *Built-in*, the certificate details are not shown.



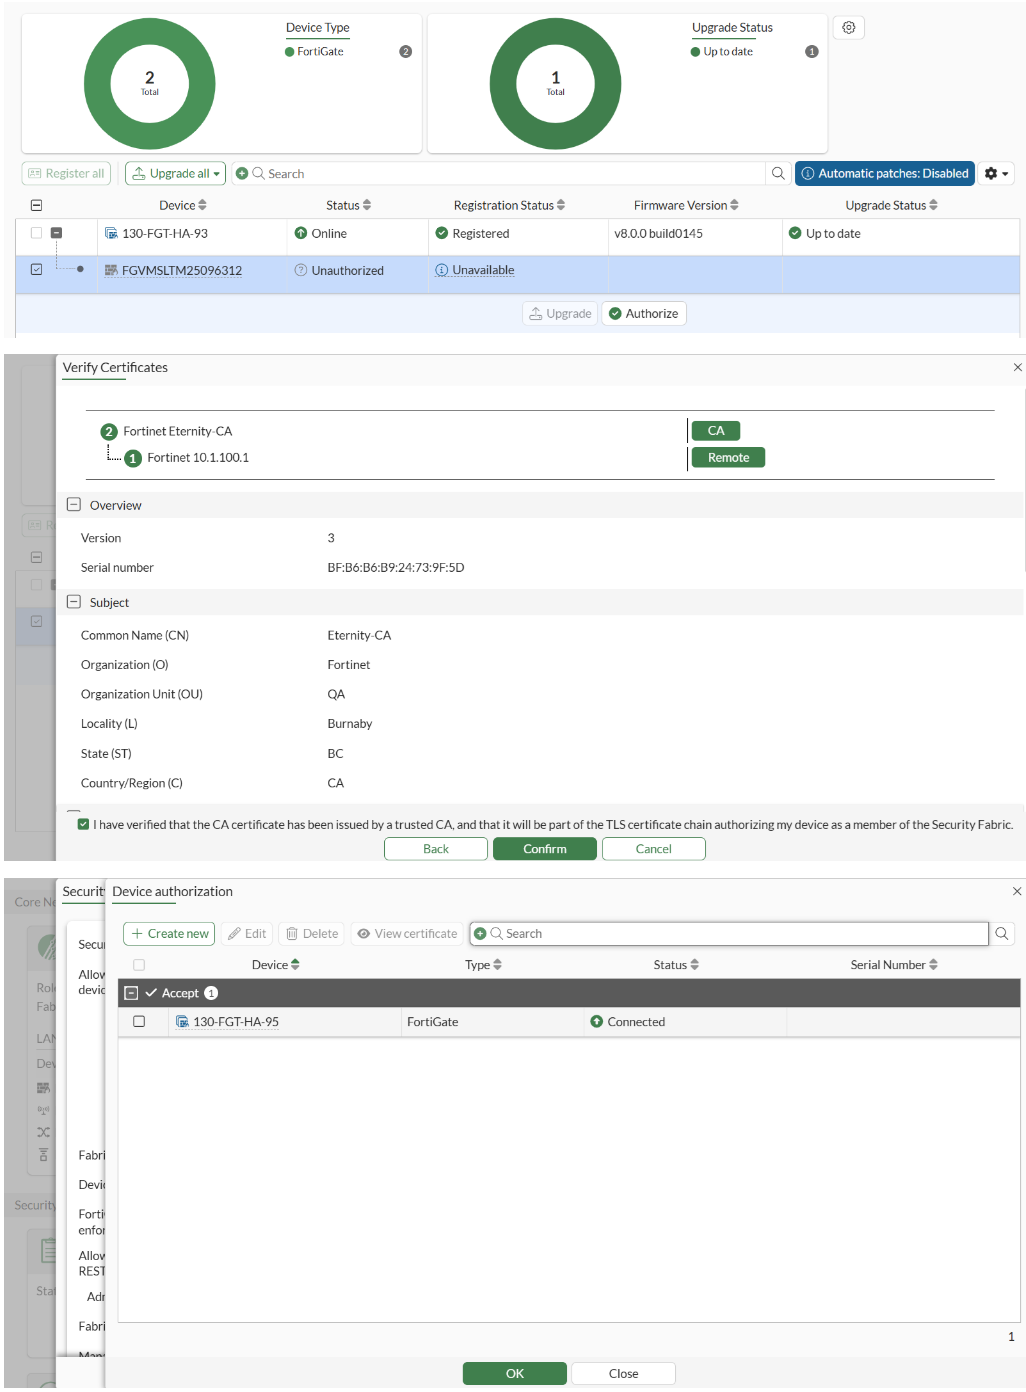
2. On the downstream FortiGate 130-FGT-HA-91, verify and authorize the root FortiGate (130-FGT-HA-95) in the Security Fabric.



To verify downstream FortiGates on the root FortiGate in the GUI:

1. On the root FortiGate (130-FGT-HA-93), verify the downstream FortiGate (130-FGT-HA-95) certificate chain and accept it.

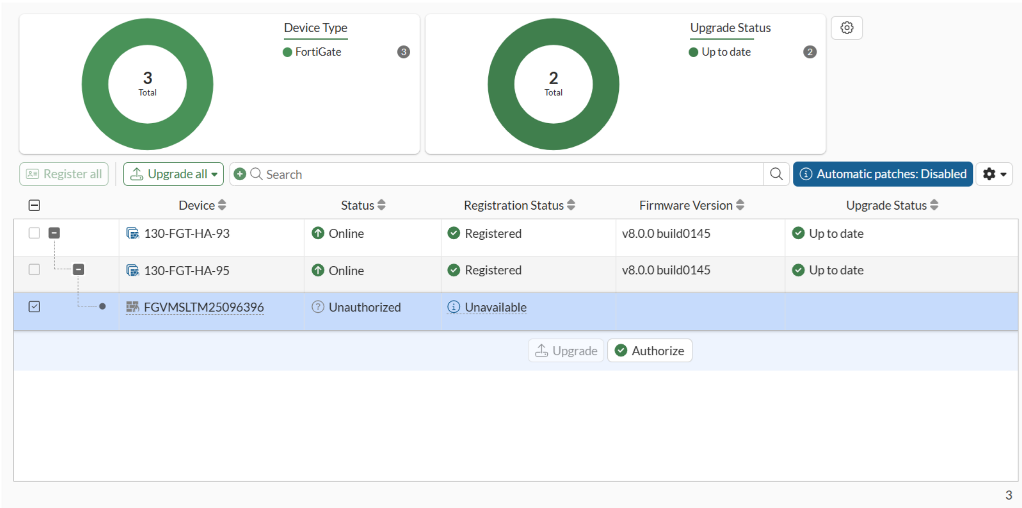
   The third-party certificate `ca` and `cn` fields for the downstream FortiGate (130-FGT-HA-95) are saved in the trusted list for the root FortiGate (130-FGT-HA-93).
2. On the root FortiGate (130-FGT-HA-93), the downstream FortiGate (130-FGT-HA-95) is authorized.

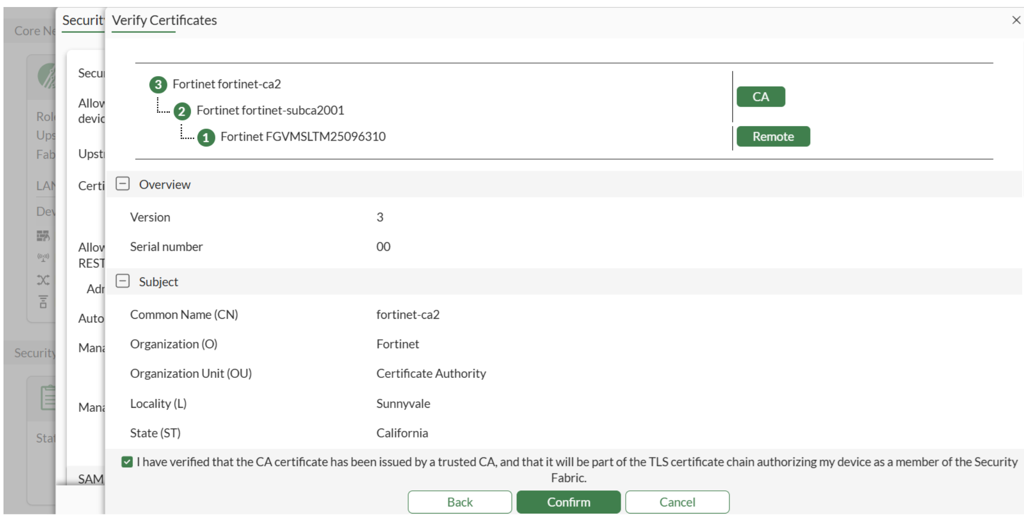


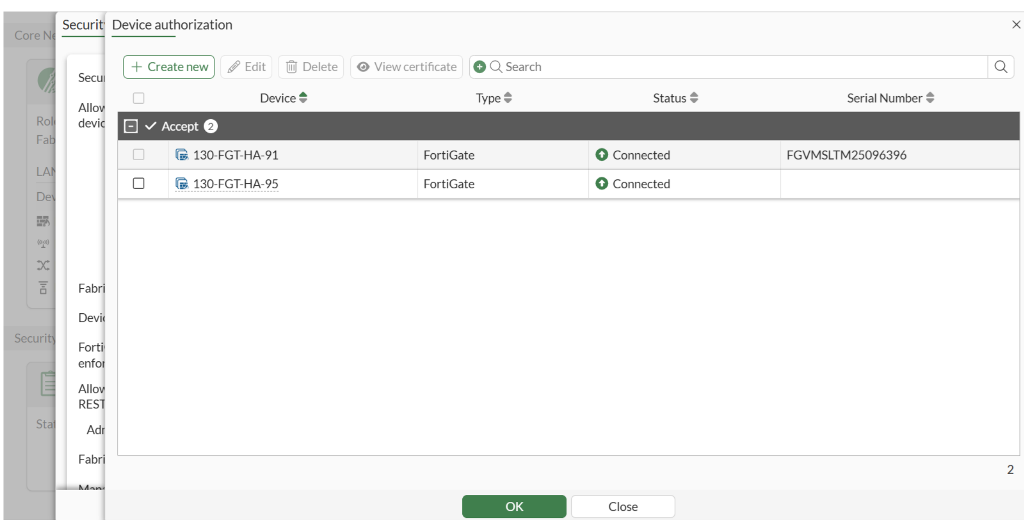
3. On the root FortiGate (130-FGT-HA-93), verify downstream FortiGate 130-FGT-HA-91 certificate chain and accept it.

   The trusted-list on the root FortiGate is updated with information about the downstream FortiGate 130-FGT-HA-91. The `cn` field includes the serial number. The `ca` field is empty because built-in Fortinet_Factory certificate is verified by the built-in Factory CA.

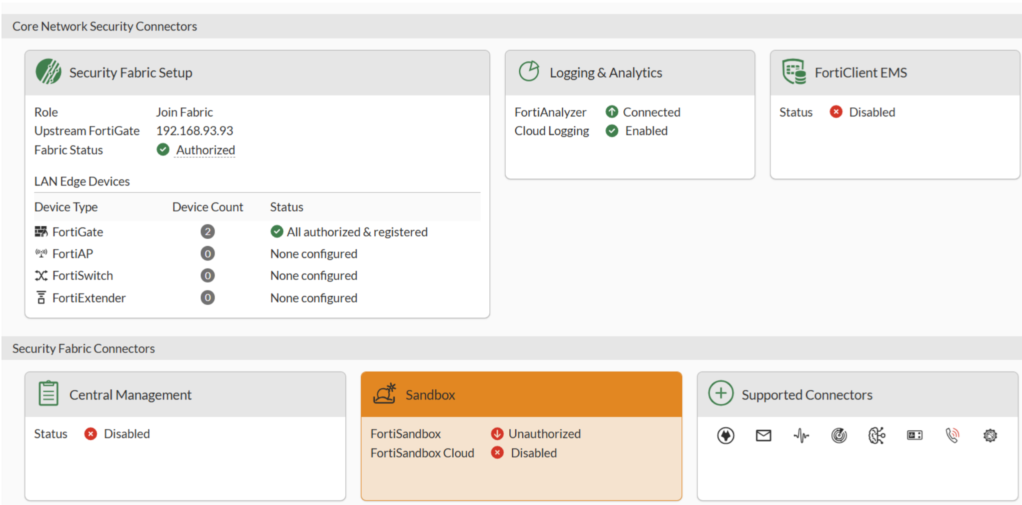
   The downstream FortiGate 130-FGT-HA-91 is authorized.



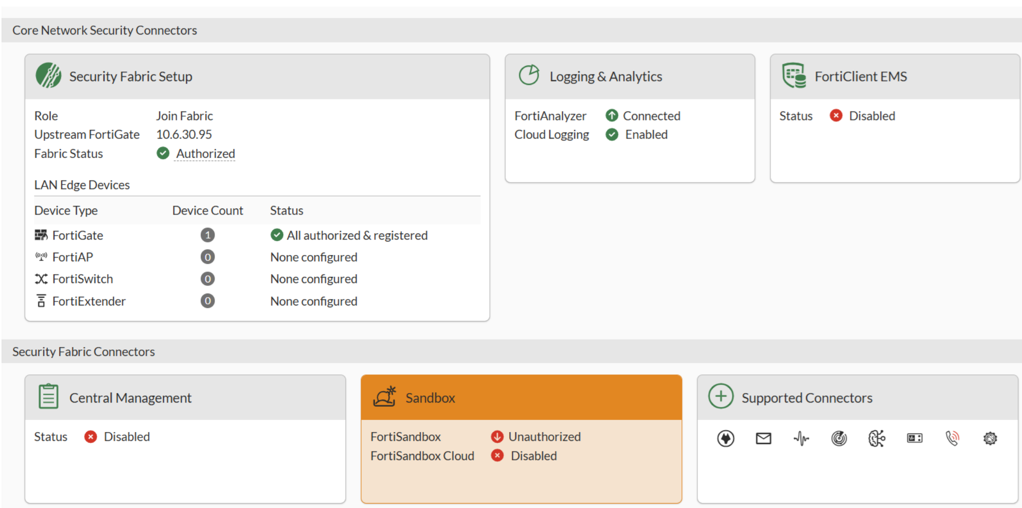




4. On the downstream FortiGate (130-FGT-HA-95), the *Fabric Status* is *Authorized*.
   The trusted-list on the downstream FortiGate is updated to include the serial numbers.



5. On the other downstream FortiGate (130-FGT-HA-91), the *Fabric Status* is *Authorized*. The trusted-list on the downstream FortiGate is updated to include the serial numbers.



To configure a Security Fabric root FortiGate in the CLI:

1. Configure 130-FGT-HA-146 as Security Fabric root FortiGate:

```
config system csf
    set status enable
    set group-name "130_csf_9394"
    set downstream-access enable
    set downstream-accprofile "prof_admin"
end
```

2. Import to the root FortiGate the CA certificate for the third-party certificate for downstream FortiGate 130-FGT-HA-95.

To configure downstream FortiGate 130-FGT-HA-95 in the CLI:

1. Import the third-party certificate to FortiGate 130-FGT-HA-95.

```
config vpn certificate local
    edit "cert-sha2"
        set password *
        set range global
    next
end
```

2. Configure downstream FortiGate 130-FGT-HA-95 to join the Security Fabric using the third-party certificate:

```
config system csf
    set status enable
    set upstream "192.168.93.93"
    set certificate "cert-sha2"
    set downstream-access enable
    set downstream-accprofile "prof_admin"
    config trusted-list
    end
end
```

3. Verify the certificate chain and accept it.

```
# diagnose sys csf authorization pending-list
Type            Serial                  IP Address              HA-Members
        Appliance       Path
----------------------------------------------------------------------------------------------
------------------------------------------
Upstream        FGVMSLTM25096310        172.18.64.3:49394
                        FGVMSLTM25096310
Certificate(0):

        Subject:     C = US, ST = California, L = Sunnyvale, O = Fortinet, OU = FortiGate, CN

```

```
# diagnose sys csf authorization accept FGVMSLTM25096310
Action saved in system.csf.trusted-list
```

To configure a downstream FortiGate 130-FGT-HA-91 in the CLI:

1. Configure downstream FortiGate 130-FGT-HA-91 to join the Security Fabric through FortiGate 130-FGT-HA-95 using a built-in certificate:

```
config system csf
    set status enable
```

```
    set upstream "10.6.30.95"
    set downstream-access enable
    set downstream-accprofile "prof_admin"
    config trusted-list
    end
end
```

2. Verify the upstream certificate chain from FortiGate 130-FGT-HA-95 and accept it.

```
# diagnose sys csf authorization pending-list
Type            Serial                  IP Address              HA-Members
        Appliance       Path
-----------------------------------------------------------------------------------------------
------------------------------------------
Upstream        FGVMSLTM25096312        172.18.64.3:49596
                        FGVMSLTM25096312
Certificate(0):

= FGVMSLTM25096312, emailAddress = support@fortinet.com
        Issuer:      C = US, ST = California, L = Sunnyvale, O = Fortinet, OU = Certificate
Authority, CN = fortinet-subca2001, emailAddress = support@fortinet.com
        Valid from:  2025-09-21 18:28:49  GMT
        Valid to:    2056-05-26 20:48:33  GMT
```

```
# diagnose sys csf authorization accept FGVMSLTM25096312
Action saved in system.csf.trusted-list
```

To verify downstream FortiGates on the root FortiGate in the CLI:

1. On the root FortiGate (130-FGT-HA-93), verify the certificate chain for the downstream FortiGate 130-FGT-HA-95 and accept it:

```
# diagnose sys csf authorization pending-list
Type            Serial                  IP Address              HA-Members
        Appliance       Path
-----------------------------------------------------------------------------------------------
------------------------------------------
Downstream      FGVMSLTM25096312        172.18.64.3:49596       FGVMSLTM25096313
        fortigate       FGVMSLTM25096310:FGVMSLTM25096312
Certificate(0):

        Subject:     C = CA, ST = BC, L = Burnaby, O = Fortinet, OU = QA, CN = 10.1.100.1
        Issuer:      C = CA, ST = BC, L = Burnaby, O = Fortinet, OU = QA, CN = Eternity-CA
        Valid from:  2015-08-06 16:35:09  GMT
        Valid to:    2035-08-01 16:35:09  GMT
```

```
# diagnose sys csf authorization accept FGVMSLTM25096312
Action saved in system.csf.trusted-list
```

For downstream FortiGate 130-FGT-HA-95, the third-party certificate `ca` and `cn` fields are updated in the trusted-list for the root FortiGate (130-FGT-HA-93):

```
config system csf
    set status enable
    set group-name "130_csf_9394"
    set downstream-access enable
    set downstream-accprofile "prof_admin"
    config trusted-list
        edit "FGVMSLTM25096312"
            set index 1
            set ca "CSF_CA_Cert_ba22ec741e30ed89a0729517eb48859a_2"
            set cn "10.1.100.1"
        next
    end
    config shared-objects
        edit "4670f93890ec08f97422e7c8816122c5"
            set trusted-list-entry "FGVMSLTM25096312"
        next
    end
end
```

The root FortiGate (130-FGT-HA-93) shows downstream FortiGate 130-FGT-HA-95 as authorized.

```
# diagnose sys csf downstream
 1:     FGVMSLTM25096312 (192.168.95.95) UID: 4670f93890ec08f97422e7c8816122c5 Management-IP:

```

On downstream FortiGate 130-FGT-HA-91, the built-in Fortinet_Factory certificate `cn` field is saved in the trusted-list for the root FortiGate (130-FGT-HA-93). Because the downstream FortiGate is part of an HA cluster, the `cn` field includes primary and secondary serial numbers.
